

The tracking tool & setting a national anaemia target

Department of Nutrition for
Health and Development
WHO/HQ

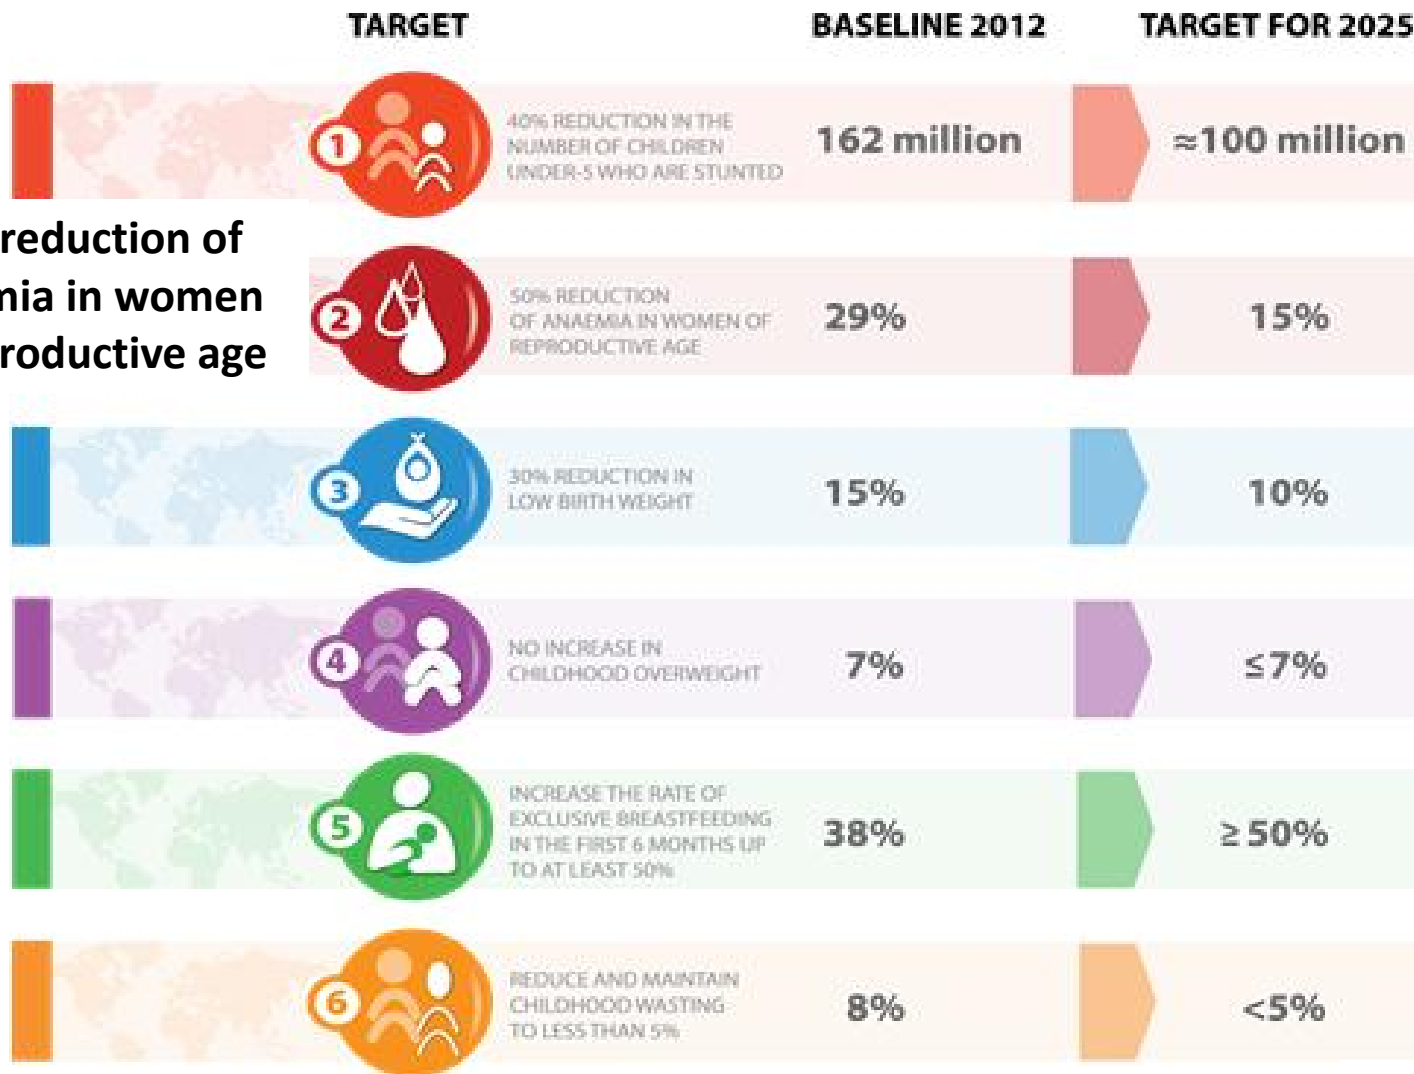

Partners/Contributors

This tool was developed **jointly by WHO, UNICEF and the European Commission**, and supported by the Department of Global Affairs Canada, the Bill and Melinda Gates Foundation, the 1000 Days Partnership, the Children's Investment Fund Foundation, the Department for International Development – United Kingdom, the International Food Policy Research Institute, the Scaling up Nutrition Movement, the United Nations Standing Committee on Nutrition, and the World Bank.

The WHA global nutrition targets

50% reduction of anaemia in women of reproductive age

Tracking tool purpose

- Provide comparable and up-to-date estimates
- Help countries to set national targets
 - Visualizing alternative scenarios
 - Deriving what-if implications
 - Summarizing country progress
- Provide global progress summary
- Map latest estimates for target indicators

Anaemia in women of reproductive age

Target group specific indicators

- Percentage of pregnant women ages 15-49 years with a haemoglobin level < 110 g/L
- Percentage of non-pregnant women ages 15-49 years with a haemoglobin level < 120 g/L

Anaemia estimates

- Model to estimate trends in haemoglobin distributions for women of reproductive age, by pregnancy status, for every country and year (1995-2011)
 - Mean haemoglobin
 - Prevalence of total and severe anaemia
- Estimates for each country-year were informed by
 - Data from that country-year itself, if available
 - Data from other years in the same country and in other countries
 - Covariates that help predict haemoglobin concentrations
 - Maternal education, % of population in urban areas, mean latitude, prevalence of sickle-cell disorders and thalasseмииs , mean BMI for women

Anaemia estimates

- Estimates of total anaemia for the year 2011 serve as baseline value for the global tracking tool
 - Stevens GA et al. Global, regional, and national trends in haemoglobin concentration and prevalence of total and severe anaemia in children and pregnant and non-pregnant women for 1995-2011: a systematic analysis of population-representative data. *The Lancet Global Health* 2013;1:e16-e25.
 - WHO. The global prevalence of anaemia in 2011. Geneva: World Health Organization; 2015
(http://www.who.int/nutrition/publications/micronutrients/global_prevalence_anaemia_2011/en/)
- Updated anaemia estimates in progress and publication expected in late 2016

[About us](#)

Global targets tracking tool

WHO Member States endorsed six global nutrition targets for improving maternal, infant and young child nutrition in 2012.

The translation of the global into national targets needs to consider nutrition profiles, risk factor trends, demographic changes, experience with developing and implementing nutrition policies, and health system development.

This tracking tool allows users to explore scenarios taking into account different rates of progress for the six targets and the time left to 2025.

The tool has three modules:

- 1) Country indicator profiles
- 2) Indicator mapping
- 3) Global and regional overviews

[Open the Tracking tool](#)

[Video introduction to the tool](#)

The tool's underlying data will be updated as new estimates of the target indicators become available.

Outputs from the Tracking Tool will feed into the Global Monitoring Framework for Maternal, Infant and Young Child Nutrition, the Global Nutrition Report, and reports from other global initiatives like the SUN Movement and the UN Secretary-General's
