

Social Networks for Food & Nutrition Security

digitalGREEN

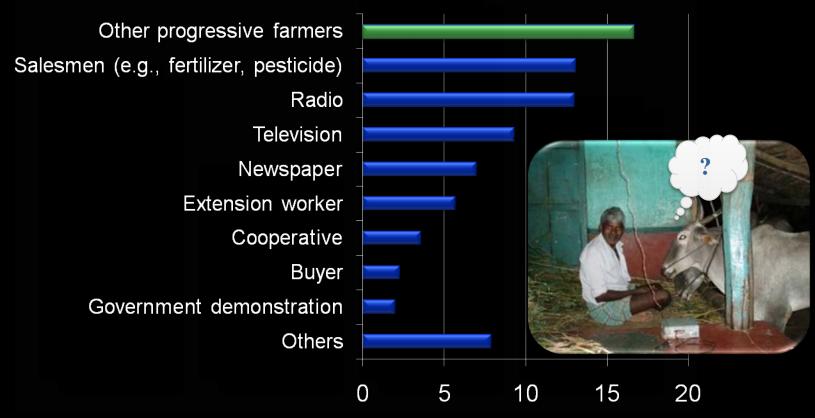

Agricultural Systems?

Device and connectivity not enough!

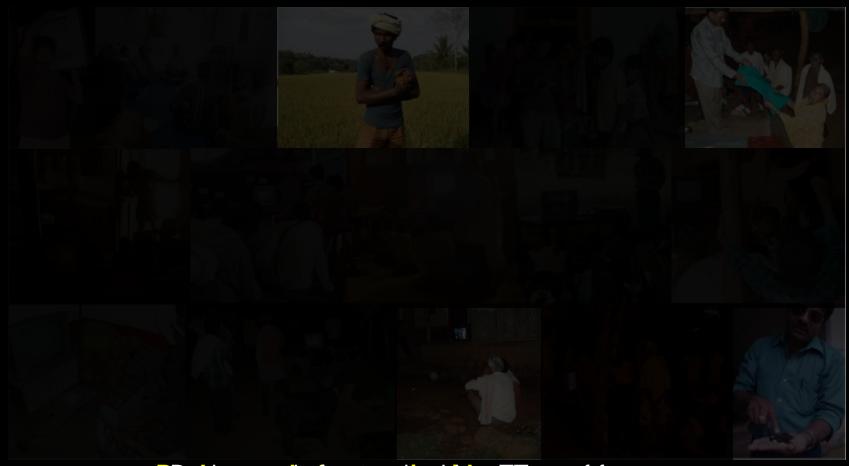

Agricultural Social Networks

% farm households (n = 51,770)

Main source of information about new technology and farm practices over the past 365 days (India: NSSO 2005)

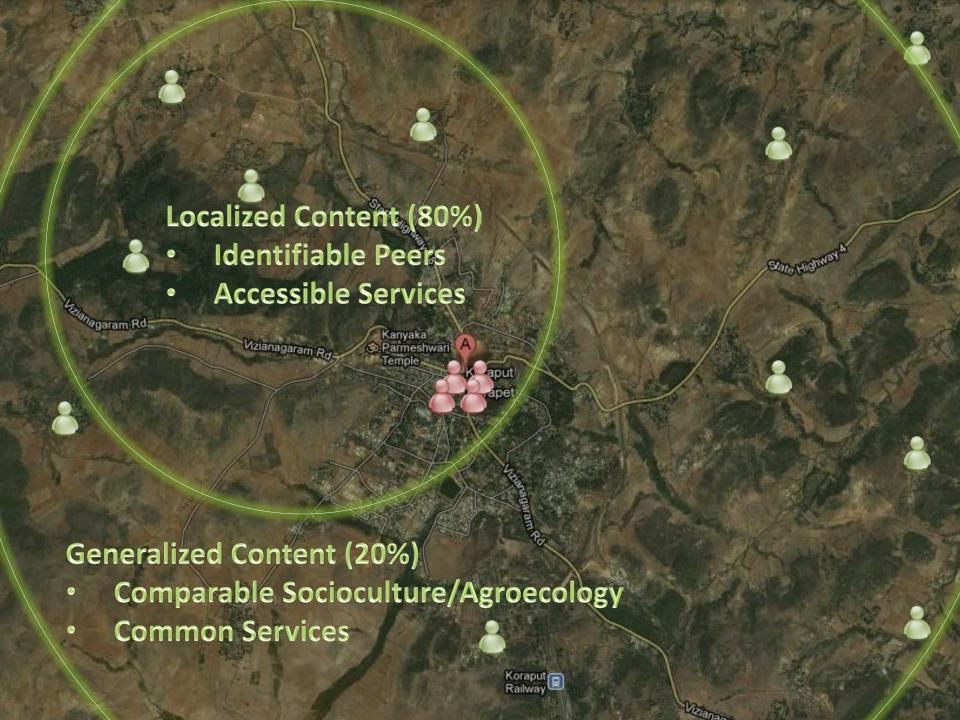

Certain Approach Certai

Background of actors imvide of Types soft content, Location and timing of screening, Method of dissemination, Degree of mediation, Background of mediation, etc.

@ digitalGREEN

To establish the feasibility of introducing nutrition messages into the current Digital Green agricultural model:

- Produce MIYCN, local videos for mediated screening among village selfhelp group members
- Assess members' recall and comprehension of video content
- Track behavior change
- Document key findings, opportunities and challenges

Women, their husbands, and mothers-in-law expressed high levels of enthusiasm

Topics, pace, flow, mediated discussions, and sociocultural familiarity with videos were strengths

Diverse sources reported women experimenting with adoption of featured behaviors

Frontline workers saw videos as aids reinforcing their efforts

Agriculture

- •Health impacts farm labor and vice-versa
- Integrated development model
- •Consumption versus income trade-off

Health

- "Mother's group" versus SHG stability
- Other family influencers
- Privacy in videos
- Unobservable behavior changes

Geographic

- Social organization cohesiveness
- •Existing extension system investment
- •Competition from other media channels
- Electricity and data connectivity

Self Help Group Savings/Credit

Homestead Gardening

Seed Treatment

Exclusive/early Breastfeeding

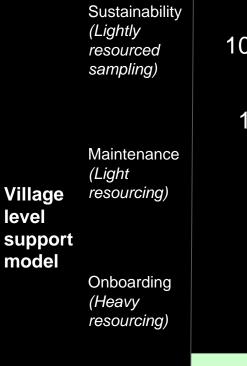

Market Linkages

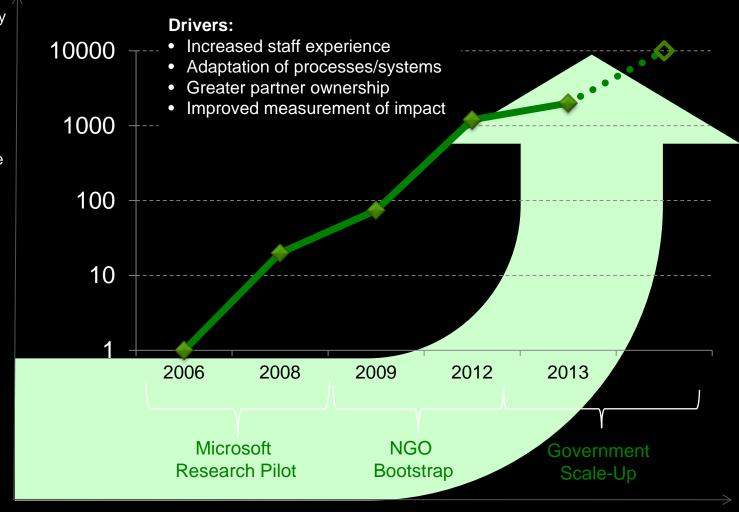

Government Schemes

Layering Technology

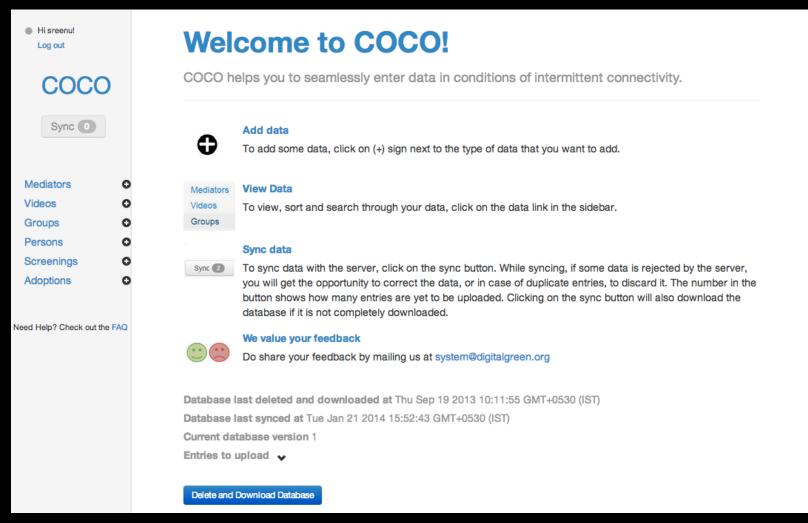

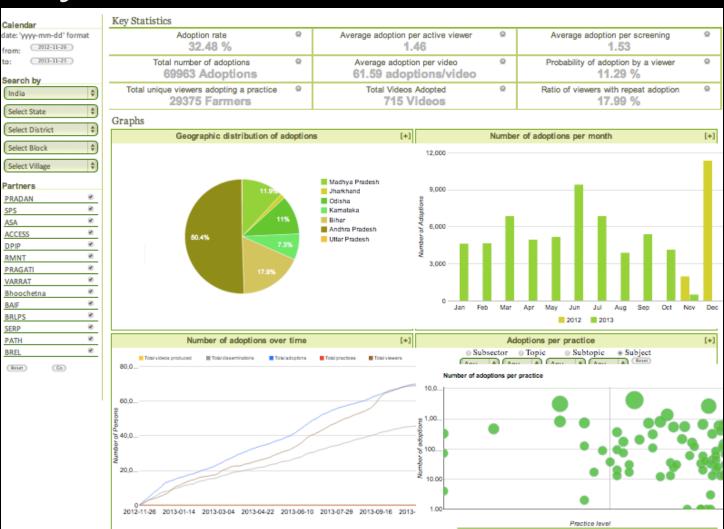

Heavy touch engagement (engagement model in first 12-24 months)

Low touch engagement (engagement over next 12-24 months)

Data Management System

Analytics

Video Courseware

Technology is Just One Part

Physical

building, goods, transport, roads

Human

education, computer literacy, motivation, awareness

Social

institutions, norms, political support

Financial

operational costs, maintenance, training

Digital

hardware, software, connectivity, content

In the *Emerging* World...

(includes wealthier segments of emerging markets)

Technology magnifies human intent and capability.

Technology itself requires support from well-intentioned, competent people or organizations.

Successful technology interventions work as a part of well-intentioned, competent organizations.
