In pregnancy, infections are a key cause of anemia and can be prevented by sleeping under a bednet and taking intermittent preventive treatment (IPTp) for malaria and deworming pills.

For infants, young children, and mothers, delayed cord clamping, sleeping under a bednet, exclusive breastfeeding, and birth spacing reduce the risk of becoming anemic.

For young children, continued breastfeeding and adequate complementary feeding (including micronutrients), preventing and treating malaria, and taking deworming pills can prevent anemia and promote healthy growth.

In pregnancy, anemia can be prevented by taking iron folic acid (IFA) supplements.

In 2010-2011, 63% of pregnant women in Senegal consumed 90 or more IFA tablets.

Prevention of malaria during pregnancy is moderate: 52% of pregnant women receive IPTp (2008-2009).

39% of infants in Senegal are exclusively breastfed during the first six months after birth (2010-2011).

In 2010-2011, 48% of children 6-23 months of age consumed foods rich in iron.*

Nearly one-third (31%) of married adolescent girls expressed an unmet need for family planning (2010-2011).

*Includes meat (including organ meat)

A multisectoral approach to prevent anemia will save lives and improve the wellbeing of mothers, infants, and children.
Anemia has substantial negative effects on the health and economic wellbeing of nations and communities. Children with anemia experience irrevocable cognitive and developmental delays and exhibit decreased worker productivity as adults.¹ Globally, maternal anemia increases the risk of pre-term delivery and low birth weight, and iron-deficiency anemia underlies 115,000 maternal deaths and 591,000 perinatal deaths each year.²

Trends in the prevalence of anemia in Senegal

### Children 6-59 months of age

<table>
<thead>
<tr>
<th>Year</th>
<th>Mild</th>
<th>Moderate</th>
<th>Severe</th>
<th>Total Prevalence</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td>20.0</td>
<td>55.0</td>
<td>7.4</td>
<td>82.6%</td>
</tr>
<tr>
<td>2010-2011</td>
<td>23.3</td>
<td>48.3</td>
<td>4.9</td>
<td>76.4%</td>
</tr>
</tbody>
</table>

The DHS hemoglobin levels used to diagnose anemia in children 6-59 months in grams/dL are: Mild 10.0-10.9; Moderate 7.0-9.9; Severe <7.0; Any <11.0.

### Women 15-49 years of age

<table>
<thead>
<tr>
<th>Year</th>
<th>Mild</th>
<th>Moderate</th>
<th>Severe</th>
<th>Total Prevalence</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td>37.4</td>
<td>18.8</td>
<td>2.9</td>
<td>59.1%</td>
</tr>
<tr>
<td>2010-2011</td>
<td>38.6</td>
<td>14.0</td>
<td>1.8</td>
<td>54.3%</td>
</tr>
</tbody>
</table>

The DHS hemoglobin levels used to diagnose anemia in non-pregnant women 15-49 years of age in grams/dL are: Mild 10.0-11.9; Moderate 7.0-9.9; Severe <7.0; Any <12.0.

### Status of Policies or Strategies to Support Reductions in Anemia*

- IFA for pregnant women
- IFA for women of reproductive age
- IFA for adolescent girls
- Iron and/or folic acid fortification legislation
- Delayed cord clamping
- Dietary diversity for complementary feeding
- Micronutrient powders for children
- Long-lasting insecticidal nets (LLINs) for household use
- Indoor residual spraying
- National policy on sanitation
- IPTp for pregnant women
- Malaria diagnosis and treatment
- Deworming for children
- Deworming for pregnant women
- Breastfeeding

*Information from the Global database on the Implementation of Nutrition Action (GINA) (https://extranet.who.int/nutrition/gina/en) or country documentation. The status of policies and strategies have been identified to the best of our knowledge. Revisions and updates are welcome.

Evidence-informed WHO guidance can be found here: http://www.who.int/elena/en/
Anemia is a Preventable Condition—Simple Interventions Can Have a Huge Impact

Increase iron uptake and stores

Overall, IFA supplementation among pregnant women increased from 2005 to 2010-2011

<table>
<thead>
<tr>
<th>Received any IFA during pregnancy</th>

Contraception use among married women did not change from 1997 to 2010-2011

Few children 6-23 months old were fed according to 3 key Infant and Young Child Feeding (IYCF) practices in 2010-2011

1. Breast milk, milk, or milk products
2. 4+ food groups
3. Minimum meal frequency
4. All 3 IYCF practices

Reduce iron losses and infection

Insecticide-treated mosquito net (ITN) use more than doubled from 2005 to 2008-2009*

Not enough children and women received deworming medication in 2010-2011*

Pregnant women 15-49 years

Multiple Sectors Play a Role in Anemia Prevention and Treatment

Stunting and anemia share similar risk factors and are responsive to many of the same interventions.

Agriculture
- Increase income and reduce poverty
- Production of biofortified and iron-rich crops
- Small livestock/poultry
- Dietary diversity

Education
- Female literacy
- Health education
- Hygiene education
- Family planning education
- Nutrition education

Health
- Iron supplementation
- Deworming
- Breastfeeding and complementary feeding
- Family planning
- Malaria prevention and treatment
- Delayed cord clamping

Water and Sanitation
- Improved latrines
- Handwashing
- Access to clean water
- Livestock management
- Infectious disease prevention
